

Report on the Environmental Impact to Balliu

January 2024

At Balliu Export, we are committed to informing our clients and stakeholders about our environmental impact. In this report, we highlight our initiatives and achievements in the use of packaging with recycled material and the promotion of material recycling.

Sustainable packaging

Actualment, el 80% dels nostres envasos estan fabricats amb materials reciclats, la qual cosa representa un avanç important cap a la sostenibilitat.

Reduction of virgin raw materials

Our polypropylene products also contain recycled material, further contributing to the reduction of environmental impact.

Renewal Plan:

Our Renewal Plan initiative has had a positive impact on waste management. During the reporting period, we have collected a total of 2030 units that have been properly treated for subsequent recycling.

This program not only allows us to reduce the amount of waste generated by our products, but also promotes the circular economy by encouraging the reuse and recycling of materials.

Conclusions:

Balliu Export remains committed to environmental protection and the promotion of sustainable practices in all our operations. Our initiatives to increase the use of sustainable materials and promote recycling demonstrate our commitment to environmental responsibility. We will continue to seek new ways to improve our environmental performance and work in collaboration with our clients and stakeholders to build a more sustainable future.
